Classification: Premium Strategic Asset — Marketplace Listing

ملخص تنفيذي

خمس مخططات استراتيجية تغطي البنية المؤسسية، الحوكمة، الامتثال، الذكاء الاصطناعي الوكيلي، والتسويق. كل مخطط مرتبط بأحد مواد التوجيه BSD-2026-07 وقابل للتنفيذ فوراً.

Executive Summary

Five strategic blueprints covering enterprise architecture, governance, compliance, agentic AI, and go-to-market. Each blueprint is tied to an article of Directive BSD-2026-07 and is executable immediately.

This is not theory. Every section has been validated against a live production stack.

Blueprint 1 — Enterprise Architecture

Directive reference: Article 2

The enterprise is a network of business units, not a hierarchy of departments. Six domains operate under one identity:

Domain	Mandate
brainsait.org	Flagship, healthcare AI
brainsait.cloud	Cloud, APIs
brainsait.de	Europe
elfadil.com	Founder platform
vip.elfadil.com	Premium
momfood.de	Adjacent commerce

Rule: No domain is an island. Every domain exposes identity, catalog, and APIs to the Enterprise Intelligence Layer.

Blueprint 2 — Governance

Directive reference: Article 0

Governance is a document, not a meeting. The directive:

- Establishes authority and supersession rules.
- Lists every business unit and agent family.
- Carries enforcement teeth (mandatory fields, registration requirements, audit hooks).

BrainSAIT's BSD-2026-07 is 16 articles, ~12 KB Markdown, generates HTML+PDF+EPUB, registered under OID `1.3.6.1.4.1.61026.10.1`. The directive governs; the auditor verifies.

Blueprint 3 — Compliance

Directive reference: Article 6

Compliance is non-negotiable. For Saudi healthcare:

- **NPHIES** — every claim validated against the CHI conformance suite.
- **FHIR R4** — every clinical resource exported with Saudi extensions.
- **PDPL** — patient data stored in-region; consent ledger anchored to enterprise identity.

Compliance is not a checkbox; it is an attribute of every product in the catalog. The `compliance` block on each product records which standards it satisfies.

Blueprint 4 — Agentic AI

Directive reference: Article 7

The enterprise is Agent-First. Where a workflow can be done by a governed AI agent, it must be.

Recognized agent families (current):

Agent	Domain

MASTERLINC	Orchestration
ClinicalLinc	Clinical decisions
ClaimLinc	Revenue cycle
PolicyLinc	Compliance
RadioLinc	Imaging
TTLINC	Training

Each agent registers under OID arc `.8` (Master AI) or its domain arc. Each agent carries AI Metadata (model, version, validation set, override path).

Blueprint 5 — Go-to-Market

Directive reference: Articles 4, 8

Distribution is the marketplace. Four categories: Software, Digital Products, APIs, Services.

Each product carries:

- bilingual name and description (AR + EN)
- SAR + USD pricing
- schema.org structured data with OID brand identifier
- marketplace listing URL
- cross-references to the registry node

The marketplace is the catalog is the registry is the directive. They are one system.

How to Use These Blueprints

- **Pick the blueprint** that maps to your immediate work.

- **Read the directive article** it references (BSD-2026-07).
- **Apply the executable artifact** — the script, the schema, the template.
- **Verify with the auditor** — `scripts/audit.py` exits non-zero on deviation.
- **Register the outcome** — every artifact gets an OID node and a changelog entry.

Why This Works

Because it is **the same playbook used to ship the actual BrainSAIT ecosystem**. Every blueprint has a working artifact behind it. Every directive article has a passing audit check. Every marketplace product has a registered OID.

The blueprints are not aspirational. They are operational.
